

EXHIBIT A: TABLE OF REFERENCE NUMERALS

Numeral	Component Label	Technical/Legal Description
100	Sovereignty Gate System	Overall architecture for database-enforced structural governance.
102	Sovereignty Gate (Boolean)	Persistence-layer constraint that blocks state transitions regardless of role or API.
104	Artifact State	The current status of the AI output within the transactional boundary.
106	Approval Conditions	The logic requiring cryptographically verified human-to-AI reasoning matches.
108	External Service	Any application-layer request, API, or unauthorized metadata attempt.
110	Finalized Artifact	The only state where an AI output is "actionable" or released.
200	Reasoning Ledger System	Architecture for anchoring AI logic to human intent.

202	Reasoning Entry	Individual logs in the append-only ledger categorized by role.
204	Confidence Score	Metric derived from intent reconstruction to anchor the log.
206	Intent Frame	Specific media frame (sampled at a predetermined interval) used as forensic evidence.
208	Human Approval	The immutable record of the operator's intentional decision action.
300	External Request Payload	Untrusted JSON data arriving from an external interface.
302	Canonicalization Module	Ensures deterministic data formatting to prevent tampering.
304	Signature Verify	Cryptographic signature verification ensuring the payload originated from a trusted operator.
400	Source Material	Original user demonstration media slated for deletion.

402	Canonicalize (Purge)	Standardizing data before fingerprinting for audit accuracy.
404	Cryptographic Fingerprint	The unique cryptographic "destruction certificate".
406	Deletion Event	The "2nd Step" where material is purged from physical storage.
408	Immutable Purge Audit Log	Tamper-proof record linking the artifact to its deleted source.
500	Intermediate Artifact A	First component of a distributed or swarm-based AI generation.
502	Intermediate Artifact B	Secondary component of a distributed or swarm-based AI generation.
504	Composite Behavior	Evaluated state of multiple "Swarm" or "Streaming" AI actions.
506	Governance Enforcement	Gate evaluating the group behavior of intermediate artifacts.
508	Governed Output	The final released action resulting from composite governance.

600	Violation Watermark System	Overall architecture for defense-in-depth breach detection and forensic marking.
602	Watermark Injection Module	Module that executes when unauthorized transition is detected by Sovereignty Gate.
604	Violation Signature	Cryptographic hash binding artifact ID, timestamp, and breach classification.
606	Artifact Metadata Field	Field where violation signature is injected prior to transaction block.
608	Violation Watermark (Persistent)	Persistent marker that survives privilege escalation or system compromise.
610	Downstream System	Any consuming system that checks for violation watermarks before execution.
