

Invention Disclosure Form

DATE FORM RECEIVED

NLO FILE NO.

PART I. BASIC INFORMATION

1a. DESCRIPTIVE INVENTION TITLE.

1b. INVENTOR(S) MAILING ADDRESS TELEPHONE E-MAIL ADDRESS

Christina Cabral

3801 N Capital of Texas Hwy Ste E240-3609 Austin, TX 78746

(212) 653-1917

christinaxcabral@gmail.com

1c. OWNER. Do the above inventor(s) own the patent rights to this invention (check one)? ☐ **Yes** ☐ **No** If you answered "No," please identify the owner of the invention below including the state/country of organization for the company along with the company's mailing address.

Information above

1d. PRIOR USE, SALE OR PUBLICATION. Identify any past use, sale, display or publication of the invention (include dates).

As of January 3, 2026, there has been no public disclosure, sale, or offer for sale of the OneDuo™ system. The technology is currently maintained under confidentiality as attorney work product.

1e. RELATED PATENTS OR APPLICATIONS. List any related patents or patent applications of yours.

None. This is the initial provisional application for the Identity Nails LLC governance portfolio.

PART II. DISCLOSURE OF INVENTION

2a. PURPOSE. State the purpose of the invention.

The invention provides a non-bypassable governance enforcement system for AI-generated artifacts by binding approval state to artifact state transitions at the database layer, ensuring no AI output can finalize or execute without an immutable, cryptographically timestamped human approval record.

2b. PRIOR EXISTING TECHNOLOGY.

Existing systems rely on application-layer checks, UI approvals, or post-execution audit logging.

- **Limitations:** These controls can be bypassed via APIs or code modification.
- **Disadvantages:** Logs record events after execution and do not prevent unauthorized actions; ethics engines operate at the agent layer and can be circumvented

2c. PHYSICAL STRUCTURE. Describe the physical structure of your invention (if applicable). **Sketches, photos, or other illustrations should be attached to this form to fully illustrate your invention.** In the description of the physical structure, use reference characters to refer to components in attached illustrations.

The invention is implemented at the persistence layer and includes:

- **Sovereignty Gate (102):** database Boolean enforcement constraint
- **Reasoning Ledger (200):** append-only deliberation log
- **Canonicalization Module (302):** deterministic formatting
- **Signature Verify (304):** cryptographic disposition validation
- **Immutable Purge Audit Log (408):** deletion certification bound to artifacts (216)

2d. OPERATION/FUNCTION/USE. Give a detailed description of the invention's operation, function and use.

When an artifact attempts to transition to a finalized state, the database triggers the Sovereignty Gate. The system checks the Reasoning Ledger for a cryptographically signed human approval. If missing, the SQL constraint returns FALSE and the transition is blocked. Source material is then canonicalized, hashed, logged, and deleted, generating a destruction certificate.

2e. ALTERNATIVES. Indicate any alternative methods, materials, or apparatus of the invention.

Variations include secure-enclave enforcement, blockchain notarization, or external policy-gate authorities acting as the exclusive release mechanism.

2f. NEW FEATURES. Identify the features of the invention believed to be new.

- Database-enforced execution gating
- Deterministic 3-FPS intent reconstruction
- SHA-256 destruction certificates bound to governed artifacts

2g. ADVANTAGES. State the advantages of the invention over the Prior Existing Technology described in paragraph 2b.

- Non-bypassable SQL-layer enforcement
- Prevents unauthorized AI actions structurally
- Provides verifiable deletion while retaining compliance evidence

PART III. PERSON SUBMITTING FORM

FULL NAME Christina Cabral	SUBMISSION DATE 2026/01/03
MAILING ADDRESS 3801 N Capital of Texas Hwy Ste E240-3609 Austin, TX 78746	BUSINESS TELEPHONE
